

CERTIFICATION SCHEME FOR PERSONNEL

DOCUMENT No. CSWIP-ISO-NDT-11/93-R
Requirements for the Certification of Personnel Engaged in Non-Destructive Testing in accordance with the requirement of BS EN ISO 9712

APPENDIX 1

Examination Format and Syllabus for the Certification of Personnel engaged in Non-Destructive Testing of Welded Joints and General Engineering Components

PART 1c: Time of Flight Diffraction Ultrasonic Inspector (TOFD) of Welds in Ferritic and Non-Ferritic Materials, Levels 1, 2 and 3

3rd Edition, February 2016

Issued under the authority of the Governing Board for Certification
All correspondence should be addressed to:

TWI Certification Ltd
Granta Park, Great Abington, Cambridge CB21 6AL, UK
Telephone: +44 (0) 1223 899000
Fax: +44 (0) 1223 894219.
Email: twicertification@twi.co.uk
Web: www.cswip.com

CSWIP is administered by TWI Certification Ltd
The use of the UKAS Accreditation Mark indicates accreditation in respect of those activities covered by Accreditation Certificate No 25

These syllabi are applicable to candidates seeking certification in accordance with Document CSWIP-ISO-NDT-11/93-R, 'Requirements for the Certification of Personnel engaged in Non-Destructive Testing, (latest issue).

1. Level 1 –TOFD Ultrasonic Operator (Welds)

Set up, calibration and data gathering of plate and pipe welds using TOFD ultrasonic equipment for the material selected.

1.1. General theory examination

- 40 multiple choice questions
- Time allowed 60 minutes
- Pass mark: 70%

1.2. Specific theory examination

- 20 multiple choice questions
- Time allowed 30 minutes
- Pass mark 70%

1.3. General practical examination

The candidate is required to optimise a calibration of TOFD ultrasonic equipment to the requirements of TechSpec EN 1475 Section 10.

- Time allowed 1 hour
- Pass mark 70%

1.4. Specific practical examination

The candidate is required to complete an examination of two welds from the categories required selected by the examiner and produce complete and accurate data files.

Calibrate the TOFD sensitivity
Calibrate the motor drive unit (where appropriate)

- Time allowed 3 hours
- Pass mark 70%

Note: The samples shall be in the thickness range of 6 to 15mm and above 15mm.

2. Level 2 –TOFD Ultrasonic Operators (Welds)

2.1. General theory examination

- 40 multiple-choice questions
- Time allowed 60 minutes
- Pass mark 70%

2.2. Specific theory examination

- 20 multiple-choice questions
- Time allowed 30 minutes
- Pass mark 70 %

2.3. General practical examination

The candidate is required to optimise a calibration of TOFD ultrasonic equipment to the requirements of TechSpec EN 1475 Section 10.

- Time allowed 60 minutes
- Pass mark 70%

2.4. Specific practical examination

The candidate is required to complete an examination, collect and store test data of two linear welds from the categories required selected by the examiner and produce complete and accurate data files. Weld preparation should include double-V and single-V configurations.

- Time allowed: 2 hours
- Pass mark 70%

Interpret the results of four recorded weld scan data files selected by the examiner and report the results of the inspections in an indicated format, showing the size and location of flaws in the welds.

- Time allowed 2 hours
- Pass mark 70%

The candidate is in addition required to draft an NDT instruction suitable for a Level 1 operator for a testing of one linear butt weld selected by the examiner, to a provided code, standard or specification, and to prove the instruction by testing.

- Time allowed 1.5 hours
- Pass mark 70%

Note: The samples shall be selected by the examiner. The samples shall be in the thickness range of 6 to 15mm and above 15mm.

Candidates who hold Level 1 TOFD certification in compliance with EN 473 or ISO 9712 will be have the following allowances/exemptions from the following parts of the Level 2 examination:

- Level 2 General Practical Examination
- Production of two data file as required in the Level 2 Specific Practical examination

3. Level 2 – TOFD Ultrasonic Data Analysis

Interpretation and evaluation of TOFD ultrasonic inspection data.

3.1. General theory examination

- 40 multiple-choice questions
- Time allowed 60 minutes
- Pass mark 70%

3.2. Specific theory examination

- 20 multiple-choice questions
- Time allowed 30 minutes
- Pass mark 70 %

3.3. Specific Practical Examination

The candidate is required to assess and evaluate four data files from the categories required, selected by the examiner, and report the results therein.

- Time allowed 2 hours
- Pass mark 70%

4. Level 3

4.1. Basic Examination

Section A1 Materials Science and Process Technology

- 25 multiple choice questions
- Time allowed 40 minutes
- Pass mark 70%

Section A2 – Knowledge of the Certification System

- 10 multiple choice questions
- Time allowed 15 minutes
- Pass mark 70%

This part of the examination may be open book.

Section B Level 2 Knowledge of Other NDT Methods

This section tests the knowledge of the candidate in at least four methods of NDT at a Level 2 standard. The methods shall be chosen by the candidate and shall include at least one volumetric method.

- 60 multiple choice questions (15 per test method)
- Time allowed 90 minutes
- Pass mark 70%

N.B. Exemptions may apply, for this examination section to valid ISO 9712 Level 2 certificate holders in the main NDT methods.

4.2. Main Method Examination

Section C1 – Level 3 General Theory

The candidate will be tested on Level 3 knowledge relating to the test method for which certification is sought.

- 30 multiple choice questions
- Time allowed 60 minutes
- Pass mark 70%

Section C2 – Application of the NDT Method

This section of the examination may be open book in relation to codes, standards and specifications.

- 20 multiple choice questions
- Time allowed 40 minutes
- Pass mark 70%

Section C3 – Procedure

The candidate is required to draft an NDT procedure for a component selected by the examiner.

- Time allowed 4 hours
- Pass mark 70%

5. Ten Year Recertification Examination

Level 1 and Level 2 candidates whose certificates expire at the end of the maximum ten year period of validity will be required to undertake a recertification examination comprising practical tests only as detailed below.

Level 3 candidates should refer to CSWIP-ISO-NDT-11/93R, Section 7.5.3.

5.1. Level 1 –TOFD Ultrasonic Operator (Welds)

The candidate is required to calibrate the TOFD sensitivity and calibre the motor drive unit (where appropriate).

A full inspection is performed on two given weld samples and accurate and complete data files produced.

- Time allowed 3 hours
- Pass mark 70%

Note: The samples shall be selected by the examiner. The samples shall be in the thickness range of 6 to 15mm and above 15mm.

5.2. Level 2 – TOFD Ultrasonic Operator (Welds)

The candidate is required to complete an examination of two welds from the categories required selected by the examiner and produce complete and accurate data files.

- Time allowed: 2 hours
- Pass mark 70%

Interpret the results of four data files selected by the examiner and report the results of the inspections.

- Time allowed 2 hours
- Pass mark 70%

The candidate is in addition required to draft an NDT instruction for a weld selected by the examiner.

- Time allowed 1.5 hours
- Pass mark 70%

5.3. Level 2 – TOFD Ultrasonic Data Analyst

The candidate is required to assess and evaluate four data files from the categories required, selected by the examiner, and report the results therein.

- Time allowed 2 hours
- Pass mark 70%

6. Examination Syllabus

6.1. Level 1 – TOFD Ultrasonic Testing

6.1.1. General Theory

a) Brief history of development of ultrasonic testing theory

b) Ultrasonic capabilities in relation to other NDT methods

c) Physical principles of sound

Nature of sound, relationship between wavelength, frequency and velocity. Wave motions and particle vibrations, velocities of sound in common materials.

d) Behaviour of ultrasonic waves

Reflection, refraction, diffraction. Snell's laws, attenuation, acoustic impedance, mode conversion, resonance, scattering from defects.

e) Production of ultrasonic waves

Piezo-electric effect. Types and properties of transducers pulse width, near and far fields, effect of frequency and sound velocity on near field, far field and beam divergence. Dead zone, production of compression, shear and surface waves, critical angles, construction of single and twin crystal probes. Couplants.

f) Ultrasonic equipment

Block diagrams of flaw detector, functions of controls, amplifier and equipment performance characteristics. A-scan, B-scan and C-scan displays.

g) Calibration and equipment checks

Calibration and reference blocks, check for dead zone, penetrative power, resolution, sensitivity, probe index, angle of refraction, linearity of time base and amplifier. Plotting beam spread diagrams. Calibration of time base ranges. Comparison of probe sensitivities. Setting sensitivity levels for scanning.

h) Practical applications - parent material and weld examination

Information required prior to examination. Parent material examination, attenuation measurements, methods of flaw sizing 20dB, 6dB, DGS, maximum amplitude, use of flaw location slide, reporting methods. Brief knowledge of component surface finish and its measurement.

6.1.2. Specific Theory

a) TOFD instrumentation

Set up and function of instrument controls
Basic software details
Internal circuitry processing

b) TOFD transducers/probes

Principles of design and performance
Typical arrays

c) Scan types

Radial
Linear
Offset
Scan limitations

d) Sensitivity

Reference reflectors and blocks for sensitivity settings

e) Calibration and checks

Probe spacing
Exit points
Scans in thick material

f) Data collection software

File structures and naming
Data acquisition control
Encoder parameter sand set-up
Storage
Real time scans

g) Data analysis

Data transfer protocols
Analysis tools
A, B scan formats
Saving files
Report generation
Flaw verification procedures

6.2. Level 2 – TOFD Ultrasonic Testing

6.2.1. General Theory

As for Level 1 Inspector.

6.2.2. Specific Theory

As for Level 1 Inspector, with in addition

- a) Introduction to data analysis
- b) Defect length determination
- c) Defect height determination
- d) Near surface defect parameter determination
- e) Practical defect determination
- f) Reporting
- g) Data analysis and acceptance criteria
- h) Effects of different materials on defect sizing

6.3. Level 3 – TOFD

6.3.1. Section C1 – General theory

Candidates for Level 3 examinations will be questions on the contents of the syllabus for Levels 1 and 2, the questions will however be of a more complex nature.

6.3.2. Section C2 – Specific theory

Candidates for Level 3 examinations will be questioned on the contents of the syllabus for Levels 1 and 2, the questions will however be of a more complex nature. In addition they will be questioned on:

a) Alternative probe arrangements

The purpose and performance of twin crystal probes, special arrays for the detection of near surface defects, focused probes, probes with wide band frequency, phased array probes.

b) Immersion testing, gap scanning

c) Phased array, guided waves

d) Methods of digital processing

e) Flaw sizing systems

6.3.3. Section C3 – Procedure writing

Candidates are required to produce a fully detailed NDT procedure for a sample selected by the examiner from the sector in which the candidate is undergoing examination.

The ultrasonic procedure must include the scope of examination, test operator approvals, equipment and calibration, reference documents, acceptance and recording levels, reporting requirements, timings in relation to complementary NDT methods and stages of production/manufacture and actions in the case of procedure non-compliance.
