

**CERTIFICATION SCHEME FOR PERSONNEL**

**Document No. CSWIP-ISO-NDT-11/93-R  
Requirements for the Certification of Personnel Engaged in Non-Destructive Testing in accordance with the requirements of BS EN ISO 9712**

**APPENDIX 1**

**Examination Format and Syllabus for the Certification of Personnel engaged in Non-Destructive Testing of Welded Joints and General Engineering Components**

**PART 4a: Radiographic Interpreter Level 2**

**6<sup>th</sup> Edition, April 2017**

Issued under the authority of the Governing Board for Certification  
All correspondence should be addressed to:

TWI Certification Ltd  
Granta Park, Great Abington, Cambridge CB21 6AL, UK  
Telephone: +44 (0) 1223 899000  
Fax: +44 (0) 1223 894219  
Email: [twicertification@twi.co.uk](mailto:twicertification@twi.co.uk)  
Website: [www.cswip.com](http://www.cswip.com)

CSWIP is administered by TWI Certification Ltd  
The use of the UKAS Accreditation Mark indicates accreditation in respect of those activities covered by  
Accreditation Certificate No 25

These syllabi are applicable to candidates seeking certification in accordance with the current version of Document CSWIP-ISO-NDT-11/93-R Requirements for the Certification of Personnel Engaged in Non-Destructive Testing in accordance with the requirements of BS EN ISO 9712'.

## **1 Radiographic Interpreter (RI) (Welds)**

### **1.1 General theory examination**

The theory part consists of:

- 40 multiple choice questions
- Time allowed 60 minutes
- Pass mark 70%

### **1.2 Specific theory examination**

The theory part consists:

- 20 multiple choice questions
- Time allowed 30 minutes
- Pass mark 70%

### **1.3 General practical examination**

The candidate will be required to answer 16 multiple choice questions demonstrating an ability to understand and apply a given radiographic procedure followed by four questions on densitometry.

This part of the examination will be based on a written procedure provided to the candidate (open book examination).

- Time allowed 1 hour
- Pass mark 70%

### **1.4 Specific practical examination**

Certification is awarded in a number of combinations of metal groups:

Group A: Ferritic steels including clad steels: manual metal arc, MIG, TIG and mechanised fusion welding, oxy-acetylene welding.

Group B: Austenitic steels and high nickel alloys (excluding Monel): manual metal arc, MIG, TIG and mechanised fusion welding. Titanium alloys: inert gas welding.

Group C: Aluminium and its alloys: MIG and TIG welding. Magnesium and its alloys: TIG welding.

Group D: Copper and its alloys and Monel: manual metal arc, MIG and TIG welding.

The candidate is required to read, mark up, interpret and report on six radiographs for Group A plus three radiographs for each additional group (B, C or D). A minimum of twelve radiographs must be submitted and passed by each candidate. For each radiograph the candidate is required to locate and identify defects and to comment upon radiographic technique and quality of the radiographs.

The duration of the second part depends on the number of metal groups attempted:

Candidates undertaking an online examination will be asked to complete seven multiple choice questions targeting key areas concerning each of the radiographs issued. Candidates will report

on six radiographs for Group A plus three radiographs for each additional group, a minimum of 12 radiographs must be passed.

- One group 1½ hours
- Two groups 2¼ hours
- Three groups 3 hours
- Four groups 3¾ hours
- Pass mark 70% per group

## **2 Radiographic Interpreter (RI) (Castings)**

### **2.1 General theory examination**

The theory part consists of:

- 40 multiple choice questions
- Time allowed 60 minutes
- Pass mark 70%

### **2.2 Specific theory examination**

The theory part consists:

- 20 multiple choice questions
- Time allowed 30 minutes
- Pass mark 70%

#### **2.2.1 General practical examination**

The candidate will be required to answer 16 multiple choice questions demonstrating an ability to understand and apply a given radiographic procedure followed by four questions on densitometry.

This part of the examination will be based on a written procedure provided to the candidate (open book examination).

- Time allowed 1 hour
- Pass mark 70%

#### **2.2.2 Specific practical examination**

The candidate is required to interpret 12 radiographs to gain certification.

Candidates who wish to gain Dense metal **or** Light Alloy certification only will interpret and report on 12 Dense metal **or** 12 Light Alloy casting radiographs as selected by the examiner.

Candidates who wish to gain Dense metal and Light Alloy certification as a combined group will interpret and report on 12 radiographs from the two groups as selected by the examiner.

For each radiograph the candidate is required to locate and identify defects and to comment upon radiographic technique and quality of the radiographs. The duration of the second part depends on the number of metal groups attempted.

Candidates undertaking an online examination will be required to complete seven multiple choice questions for each radiograph issued targeting key areas.

- Time allowed 4 hours
- Pass mark 70% per group

### **3 Ten Year Recertification**

Candidates whose certificates expire at the end of the maximum ten year period of validity will be required to undertake a recertification examination comprising practical tests only as detailed below.

#### **3.1 Radiographic interpreter (RI) (Welds)**

The candidate is required to interpret two radiographs for the first group plus one radiograph each of any additional group. For each radiograph the candidate is required to locate and identify defects and to comment upon radiographic technique and quality of the radiographs.

Candidates undertaking an online examination will be required to complete seven multiple choice questions for each radiograph issued targeting key areas.

The duration of the test will be 15 minutes per radiograph interpreted.  
Pass mark 70% per Group.

#### **3.2 Radiographic interpreter (R-Int) (castings)**

The candidate is required to interpret two radiographs per group to gain certification.

For each radiograph the candidate is required to locate and identify defects and to comment upon radiographic technique and quality of the radiographs.

Candidates undertaking an online examination will be required to complete seven multiple choice questions for each radiograph issued targeting key areas.

The duration of the test will be 15 minutes per radiograph interpreted.  
Pass mark 70% per Group.

### **4 Examination Syllabus**

#### **4.1 Radiographic Interpreter (RI) (Welds) Level 2 Syllabus**

##### **4.1.1 General theory**

###### **a. Nature and Properties of X and/or Gamma Radiation**

Penetration, absorption, scatter, diffraction, transmission. Rectilinear propagation. Photographic properties.

###### **b. Photographic aspects**

Dark room procedures: layout, light traps and entrance, wet and dry benches, film-pass hatches, processing units, safe-lights and ancillary equipment. Handling and processing of films, temperature control.

Sensitometry: types of film and paper used in industrial radiography. Characteristic curves, speed, contrast, definition, density. Fog. Graininess. Inherent unsharpness. Latitude. Commercial films and their properties. The use of screens.

###### **c. Fundamental aspects of Radiographic quality**

Quality of radiation. Optimum working densities. Radiographic contrast. Objective and subjective contrast. Methods of controlling radiographic contrast. Effects of scattered radiation. Use of filters, screens, masking and blocking media. Influence of processing conditions and viewing conditions on contrast.

Radiographic definition: objective and subjective, unsharpness, geometric unsharpness, inter-relationship of dimensions of focal spot or source, focus (source) - object and focus (source) - film distances. Inherent unsharpness. Movement. Film screen contact. The summation of factors controlling definition.

Control of radiographic sensitivity and its assessment by the use of image quality indicators.

**d. X-ray and Gamma ray equipment**

A knowledge of the effects on radiographic quality in the event of equipment change.

**e. Geometry of Image Formation**

Control of focus (source) - object distance, object - film distance, focus (source) - film distance. Selection of beam angle.

**4.1.2 Specific Theory - Welds**

**a. Exposure Calculations**

Effect of distance on exposure. Use of exposure charts and calculators for X and gamma radiography.

**b. Application to Welds**

Interpretation of Radiographs in steel plate, and circumferential butt joints in steel pipe.

Welds in aluminium.

Welds in copper and its alloys

Welds in small bore tubes

The determination of the depth of a flaw from one surface in a specimen by the practical use of the tube or source shift method.

**c. Viewing of Radiographs**

Optimum viewing conditions. Checking for acceptable density, contrast and freedom from spurious indications. Analyse the loss of sensitivity in order to rectify faulty techniques.

Spurious indications: light (and safe-light) fogging, chemical fog, strains, air bubbles, reticulation, pressure marks, static marks, drying marks, finger marks, defective screens, incomplete fixing, film manufacturing faults.

**d. Welding Technology**

Terminology for welds, welded joints, welding procedures, weld defects, parent metal defects.

Influence on techniques of geometry, size, surface condition, parent metal composition, weld metal structure. Influence of surface cladding, heat treatments and weld repairs.

Basic principles of fusion welding processes.

Types of defect associated with particular parent metal/welding process combinations. Types of defect in welds and parent metals detectable by radiography. Defect parameters which influence detectability, eg size, geometry, distance from surface, orientation, reflectivity and opacity.

#### 4.1.3 Specific theory – castings

##### **Casting Methods;**

Sand castings, pressure and gravity die casting, investment casting.

##### **Casting Defects:**

Voids; porosity, gas and blowholes, airlocks and sponge

Surface defects; sinks, scabs, chisel and other fettling marks fins and flash.

Linear indications; hot tears, cold or stress cracks and cold shuts

Other defects; un-fused chill and chaplets, core shifts and mould damage.

##### **Heat treatment**

Common heat treatments and their reason for use.
