

DOUBLE CERTIFICATION!

Two companies in the Severfield Rowen PLC group have achieved certification to EN ISO 3834, the recently revised standard that deals with quality requirements for welding. The assessment and certification processes were carried out by TWI Certification Ltd under its UKAS accredited Welding Fabricator Certification Scheme. The companies were Severfield- Reeve Structures Ltd of Thirsk and Watson Steel Structures Ltd based in Bolton.

John Krancioch, Group Welding and Quality Manager of Severfield Rowen PLC, said, 'Certification to the welding quality standard has demonstrated that the two companies are more than capable of continuing into the millennium with a positive attitude towards change for improvement.'

Tim Jessop, Chief Executive of TWI Certification Ltd, congratulated the two companies on their achievement and commented that an increasing number of product and application standards now required compliance with EN ISO 3834. Certified companies were therefore in a strong position in an increasingly competitive business.

ISO 3834 Certificates under TWI Certification Ltd's Welding Fabricator Certification Scheme were recently presented to representatives from Severfield Reeve and Watson Steel Structures
